Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-4, 6, 8, 12-20, 24-29, 31, and 35-43 are rejected under 35 U.S.C. 103(a) as being obvious over Funkhouser (6986391) in view of Chatterji et al. (6454008).

The applied reference has a common inventor (Funkhouser) and assignee (Halliburton) with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art only under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 103(a) might be overcome by: (1) a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not an invention "by another"; (2) a showing of a date of invention for the claimed subject matter of the application which corresponds to subject matter disclosed but not claimed in the reference, prior to the effective U.S. filing date of the reference under 37 CFR 1.131; or (3) an oath or declaration under 37 CFR 1.130 stating that the application and reference are currently owned by the same party and that the inventor named in the application is the prior inventor under 35 U.S.C. 104, together with a terminal disclaimer in accordance with 37 CFR 1.321(c). This rejection might also be overcome by showing that the reference is disqualified under 35 U.S.C.

Art Unit: 3672

103(c) as prior art in a rejection under 35 U.S.C. 103(a). See MPEP § 706.02(l)(1) and § 706.02(l)(2).

Funkhouser et al. disclose the claimed terpolymer, acrylamide, acrylic acid or salt, viscosity breaker, cross-linking agent, and buffer but not a foaming agent or nitrogen.

Chatterji et al. present a fracturing fluid with a foaming agent using nitrogen in a compound including 2-acrylomido-2methylpropane sulfonic acid.

It would have been obvious to a person having ordinary skill in the art at the time the invention was made to use a foaming agent with the Funkhouser et al. fracturing fluid, as presented by Chatterji et al., in order to prevent excessive hydrostatic pressure (Chatterji et al., col. 1, lines 45-46).

Allowable Subject Matter

Claims 21-23 and 44-46 are allowed.

Claims 5, 7, 9-11, 30, and 32-34 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

Applicant's arguments, see page 3, filed 24 January 2006, with respect to the rejection of claims 1, 2, 6-8, 12, 13, 24, 25, 29-31, 35, and 36 under 35 U.S.C. 103 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new rejection is made in view of Chatterji et al. The examiner contends this reference shows it is well known to add a foaming agent to a fracturing fluid.
